As students solve the math problems, they will learn new math concepts and skills. They will also develop their problem-solving and critical thinking skills. The mystery is designed to be challenging, but it is also possible to solve with a little patience and perseverance.

The Mystery

The Outlier Secret begins in the small town of Willow Creek. A series of strange events have occurred in the town, including the disappearance of

several people. The only clue to solving the mystery is a series of math problems.

The math problems are written in a code that must be deciphered in order to solve the mystery. The code is based on the Fibonacci sequence, which is a series of numbers in which each number is the sum of the two previous numbers. The Fibonacci sequence begins with the numbers 0 and 1, and continues as follows:

0, 1, 1, 2, 3, 5, 8, 13, 21, 34, ...

To decipher the code, students must use their knowledge of the Fibonacci sequence to find the next number in the sequence. The next number in the sequence is the sum of the two previous numbers. For example, the next number in the sequence after 34 is $34 + 21 = 55$.

Once students have deciphered the code, they can use it to solve the math problems. The math problems are designed to be challenging, but they are also possible to solve with a little patience and perseverance.

The Solution

The solution to the Outlier Secret is a series of numbers that can be used to find the location of the missing people. The numbers are hidden in the math problems, and students must use their problem-solving skills to find them.

Once students have found the numbers, they can use them to find the location of the missing people. The location of the missing people is a secret, but it can be revealed by solving the mystery.
